Deadline for manuscript submissions:

31 October 2020

Message from the Guest Editors

Tropical wetlands are recognized for providing environmental services and ecological functions at several landscape scales that are important from local to global scales. There are considerable uncertainties regarding the global spatial extent of tropical wetlands, the relative distribution of wetland types, and their environmental status. Tropical wetlands are under considerable environmental pressure from global change, including hydrological disruption, eutrophication, urban pollution, desiccation, biodiversity loss, deforestation, agricultural, and aquaculture conversion but their effects have rarely been quantified. This SI focuses on recent ecological research on status and the main environmental impacts threatening the vulnerability of tropical wetlands in the twenty-first century. The main goals are to determine how the different environmental impacts are addressing the disturbance of tropical wetlands and their resilience, how these altered systems contribute to the loss of important environmental services, and how they can be conserved and protected in the framework of the global environmental and socio-economic crises that we will face over the next 100 years.

Message from the Editor-in-Chief

The relevance of water in human development and sustaining life, fuels general and scholarly interest in the world's water resources. A better understanding of all aspects of water and its relation to food supply, energy production, human health, and the functioning of ecosystems is key in managing this precious resource in a sustainable, efficient and equitable manner. *Water* invites authors to provide innovative original full articles, critical reviews and timely short communications. We ensure a critical review process and a quick turnaround between submission and final decision.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High visibility: indexed by the **Science Citation Index Expanded** (Web of Science), Ei Compendex and other databases.

CiteScore (2018 Scopus data): **2.66**, which equals rank 39/203 (Q1) in 'Water Science and Technology' and rank 34/204 (Q2) in 'Aquatic Science'.
